Group 5: Milestone 2
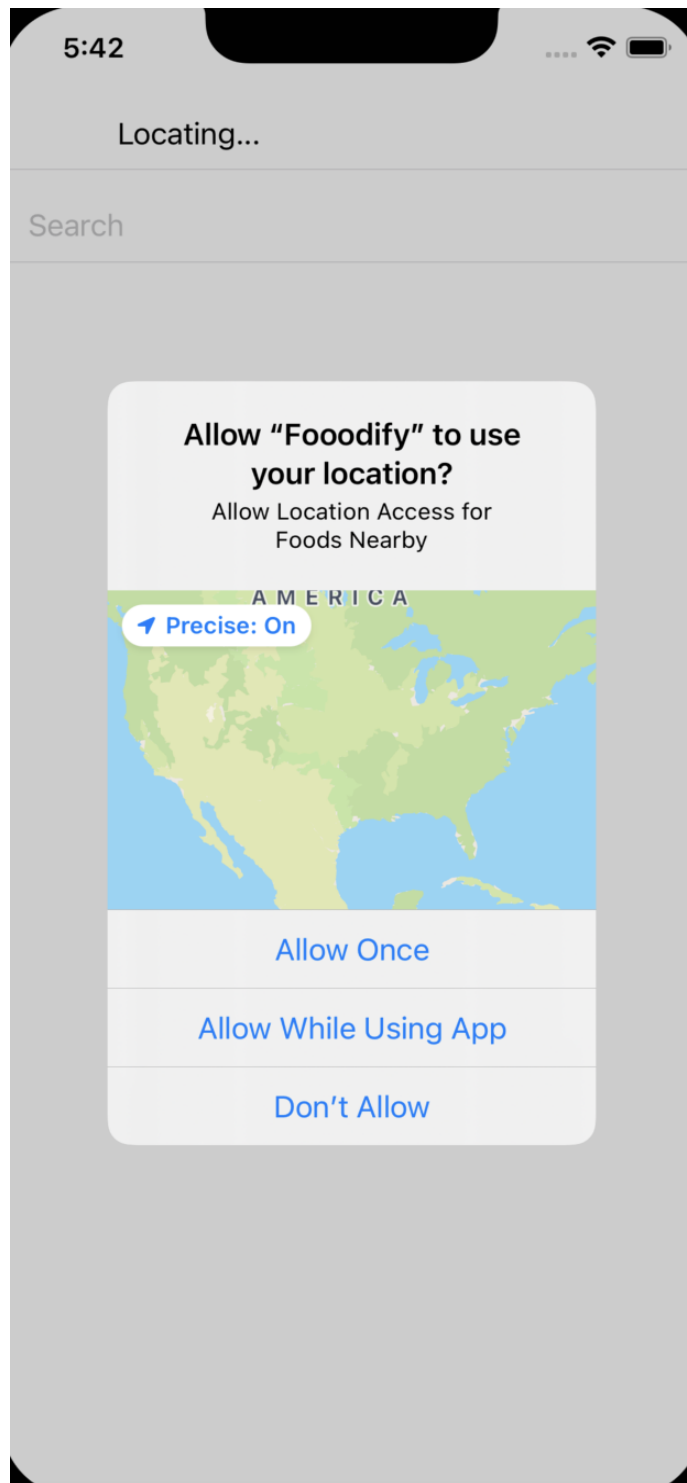

Sahil Sinha
Anant Patel
Aadil Shekh
Suraj Narang

Accomplishments:

- Successfully collect food items
- Split views to organize file system and the different views when adding new preferences
- Efficiently able to request user for location
 - Handled both cases of accepting and denying location access

Next Goals:

- Implementing Yelp API and finishing minimum requirements
- Connect the backend to the preferences screen
- Be able to include specific food images for recommended food items
- Display restaurant information (e.g. exact location, phone number, business hours)
- Allow user to create their profile that they can log in/out later (stretch goal)

Here is the current view of location-based request to the user:

User receives a Text pop-up if they choose to deny location access:
